

Abishek V

Software Engineer | Securden

PROFESSIONAL OVERVIEW

Software Engineer specializing in building robust, high-performance systems with a security-first backend architecture. Experienced in designing scalable enterprise solutions and implementing comprehensive enterprise integrations with production-grade engineering practices.

CORE EXPERTISE

- **Backend Architecture:** Designing high-throughput, secure, and resilient enterprise applications.
- **Enterprise Integrations:** Seamlessly connecting and integrating extensive DevOps toolchains.
- **Identity Providers:** Implementing and managing Identity Provider (IdP) integrations.
- **Automated Tooling:** Scripting automations and streamlining workflows with Playwright, BeautifulSoup4, and Selenium, alongside DevOps tools such as Ansible, Jenkins, Terraform, Chef, and Puppet.

KEY ACHIEVEMENTS

Winner – Smart India Hackathon (2024)

Architected and engineered a specialized platform to aggregate research funds information under competitive conditions.

GUEST LECTURE DOMAIN

Topic: Multithreading and Collections Framework: Building Scalable, Concurrent Enterprise Systems

Focus Areas: Real-world thread safety, Java Collections internals, concurrent data structures, deadlock prevention, and production performance considerations.

PROFESSIONAL PROFILE

Current Role: Software Engineer
Organization: Securden
Location: Chennai, Tamil Nadu, India

Education: B.E. Computer Science Engineering
Domain Specialization: Security Architecture, Identity Providers, DevOps Integrations
